

FlyRank Week 3 - Kill Your Darlings: Curate Your Images

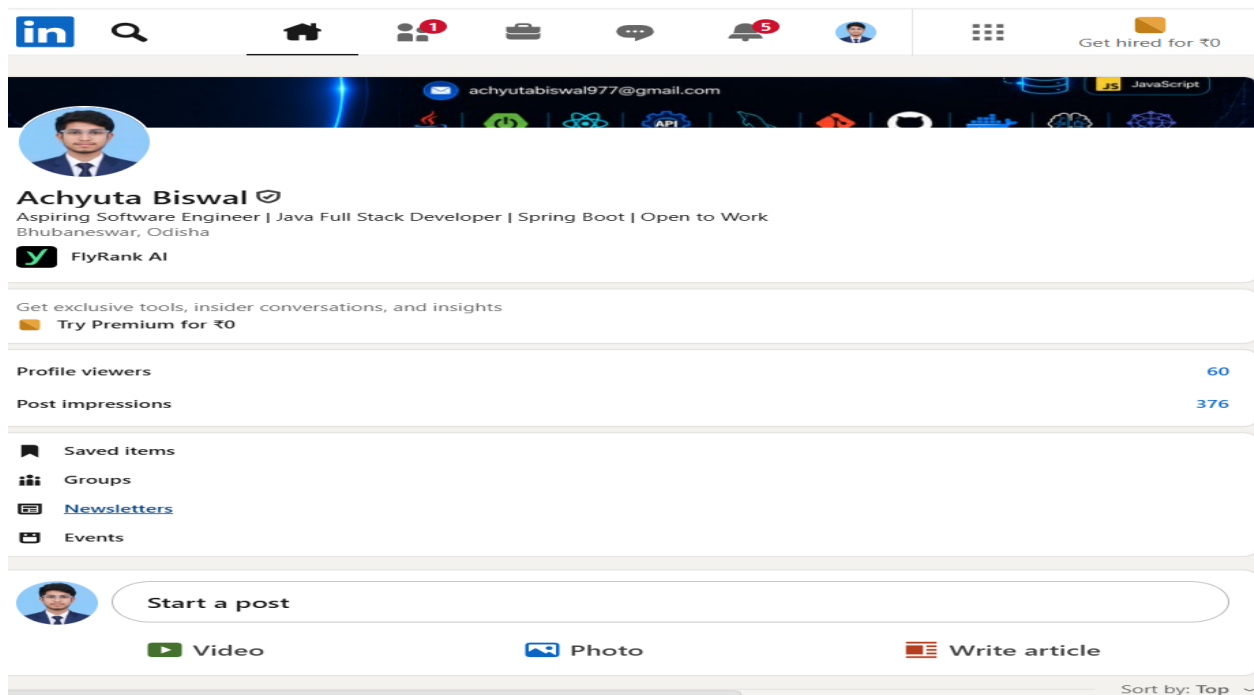

Overview

This submission demonstrates the use of real screenshots for proof of work and AI-generated visuals only for decorative elements.

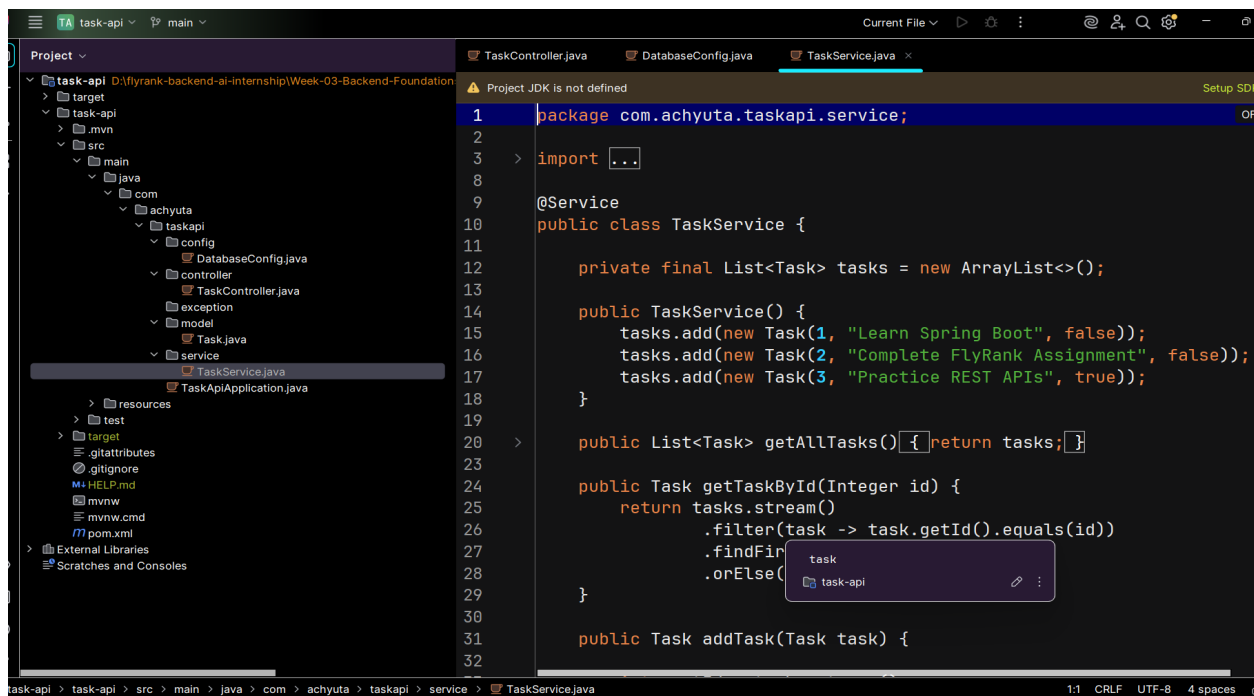

GitHub Profile (Real Screenshot)

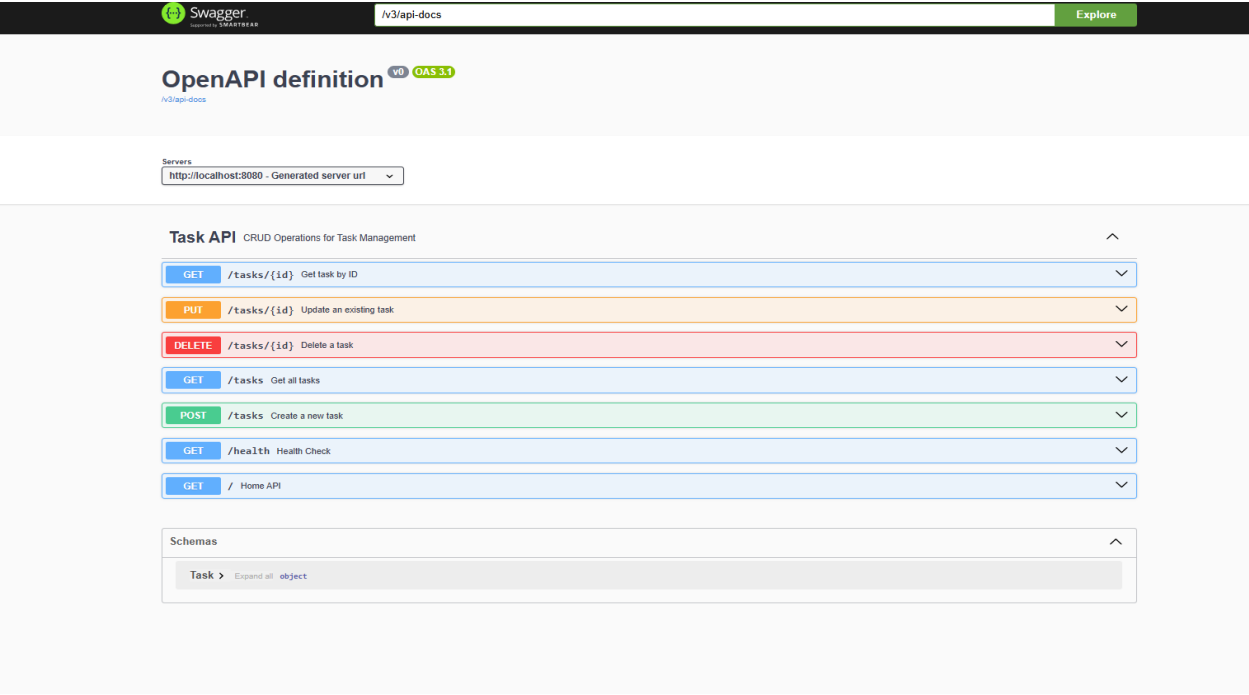

LinkedIn Profile (Real Screenshot)

Spring Boot Project (Real Screenshot)

Swagger UI (Real Screenshot)

Hero Background (AI Generated)

Technology Icons (AI Generated)

Rejected AI Image

Reason for rejection: Although visually impressive, this cyberpunk artwork distracts from my backend engineering portfolio and does not match the clean, minimal design language used across the final image set.

AI Prompts Used

1. Hero Background: Create a minimal modern technology background for a backend software

engineering portfolio. Use abstract flowing geometric shapes with a blue gradient palette, flat vector style, subtle lighting, no text, no people, 16:9.

2. Technology Icons: Create flat vector technology icons representing API, Database, Cloud, Java, AI, GitHub, Docker and Microservices using the same blue gradient minimal style.

3. Rejected Image: Create an ultra-detailed cyberpunk city featuring robots, flying cars, glowing servers, holograms and neon lights.

Real vs AI Decision

Real screenshots were used for GitHub, LinkedIn, Spring Boot project, Swagger UI, and my profile. AI-generated images were used only for decorative assets (hero background and icons).
