

Week 1 – What Are You Proving?

Proof Statement

I build secure and maintainable backend applications using Java and Spring Boot that solve real-world business problems through well-structured REST APIs and role-based access control. I am proving this to a Backend Engineering Manager at Zoho who is evaluating entry-level Java Backend Developer candidates. My goal is for my portfolio and GitHub projects to demonstrate my engineering approach and problem-solving ability, so they shortlist me for a technical interview.

Why

A CV or LinkedIn can list the technologies I know, but a portfolio shows how I apply them to solve real problems, make technical decisions, and build maintainable backend applications.
